# ARKNASAS DEPARTMENT OF HIGHER EDUCATION 2010 REPORT ON STEM ENROLLMENT AND GRADUATION TRENDS 

The purpose of this report on Arkansas STEM (Science, Technology, Engineering, and Mathematics) program activity is to inform education and policy makers about the need to prepare and graduate more students with degrees in STEM education fields.

Arkansas is witnessing a significant shortfall in its ability to meet the STEM education needs of its students which will have tremendous implications for the state's scientific and engineering workforce needed for the next decade. Addressing this issue is absolutely essential for the continued economic success of Arkansas. All Arkansas citizens must have the basic scientific, technological, and mathematical knowledge to make informed personal choices, to develop human capital, and to thrive in the increasingly technological global marketplace. However, the number of STEM graduates in Arkansas has declined during the past five years.

## Enrollment Trends

As a percent of total STEM majors over five years (fall term only, AY2006-2010), freshmen account for $35.4 \%$ of STEM majors, sophomores account for 23.4\% of STEM majors, juniors account for $17.0 \%$ of STEM majors, and seniors ${ }^{1}$ account for $23.7 \%$ of STEM majors. ${ }^{2}$ These percentages have been relatively stable during the time period reviewed.

| Table 1: STEM Student Majors by Year and Student Level Enrollment |  |  |  |  |  |  |  |  |  |

As seen above, STEM enrollment has steadily increased from AY2006 to 2010 for each student classification. Overall, STEM enrollment rose from 9,262 in AY2005 to 11,088 in AY2010 marking a 19.7 percent increase ${ }^{3}$ whereas enrollment at public institutions increased by 17.3 percent over the same time period. However, this does not hold true for students graduating within the STEM fields as discussed below under the Degree Production section.

Most STEM majors are white males although this is changing. The percentage of white students is declining. But, the change in the male/female percentages for STEM students has changed very little.

The most popular academic programs by statewide undergraduate enrollment by CIP Code ${ }^{4}$ are:

1. Biology/Biology Sciences General (CIP 26.0101) with a AY2009 enrollment of 3,243 students (64.7 percent increase over 5 years);
2. Computer and Information Sciences, General (CIP 11.0101) with a AY2009 enrollment of 1,484 students (-9.5 percent);
3. Chemistry, General (CIP 40.0501) with a AY2009 enrollment of 1,005 students ( 45.4 percent);
4. Mechanical Engineering (CIP 14.1901) with a AY2009 enrollment of 573 students (16.7 percent); and
5. Mathematics, General (CIP 27.0101) with a AY2009 enrollment of 419 students ( 6.6 percent).

## Degree Production

At the associate degree level (including both two-year and four-year institutions), the total number of STEM graduates has increased 54.6 \% between AY 2005 and AY 2009 (from 529 to 818 with the highest increase during the 2009 academic year). ${ }^{5}$ However, this growth only occurred at the two-year institutions (see Table 3).

## -STEM Graduates

At the four-year institution baccalaureate level, UAF ${ }^{7}$ continues to have the highest number of STEM graduates. Three schools (UAFS, UALR, and UCA) have also experienced the biggest increases in STEM graduates. (See Table 4B.)

Overall, of the 11,002 total STEM graduates from AY2005 to AY2009:

- The largest portion (23.0\%) of credentials awarded was in CIP category 11: Computer and Information Sciences and Support Services. ${ }^{10}$
- The largest portion for the associates and lower credentials (18.8\%) was in CIP 15: Engineering Technologies/Technicians. ${ }^{11}$
- The largest portion for the baccalaureate credentials (18.1\%) was in CIP 26: Biological and Biomedical Sciences. ${ }^{12}$

Of the AY 2005 Baccalaureate STEM graduates, 315 enrolled in graduate school. Of the AY 2009 Baccalaureate STEM graduates, only 136 enrolled in graduate school. Over the course of five years, those baccalaureate degree holders who majored in a STEM related field seeking a post-baccalaureate STEM degree have declined by $56.8 \%$ as seen on Table 7.

## Discussion

The good news:

- Overall STEM enrollment is up by 19.7 percent from AY2005 to AY2009. ${ }^{13}$
- Overall STEM graduates as measured by credentials awarded is up by 13.7 percent from AY2005 to AY2009. ${ }^{14}$

The bad news:

- As a percent of all statewide graduates, the percentage of STEM graduates has not kept pace with the growth in credentials awarded having gone from 9.8 percent in AY2005 to 8.5 percent in AY2009. ${ }^{15}$
- Education majors focusing on STEM related fields are in decline. Overall enrollment dropped by 26.8 percent between AY 2005 and AY 2009. ${ }^{16}$

National trends are only slightly better, but not on target with expectations (see graph below). A coalition formed in 2005 known as Tapping America's Potential (TAP) came out with an ambitious goal of doubling STEM bachelor's-level graduates by 2015. In their 2008 progress report, they found that the 200,000 number of graduates had only slightly increased. ${ }^{17}$

## Summary \& Recommendations

In Arkansas, STEM enrollments have increased over the past five years. In addition, total credentials awarded in the STEM fields increased but at a much slower pace. However, the number of Baccalaureate credentials awarded has decreased over the same time period. This should represent a significant concern for higher education officials and faculty - that efforts are working to improve the number of students seeking STEM credentials from an input perspective (more majors). But looking at the issue from an output perspective (graduates), the outlook is not as bright.

In order to reverse the current trend of fewer graduates, higher education institutions should consider establishing support mechanisms, such as:

1. Creating residential STEM communities or STEM dormitories;
2. Providing special access to tutors;
3. Creating customized or special new student orientations for STEM students
4. Creating and promoting STEM student organizations and/or social organizations;
5. Providing targeted scholarships for juniors and/or seniors in STEM fields; and
6. Developing business/education internships for STEM students.

Additionally, K-12 and higher education agencies should:

1. Integrate engineering education into $\mathrm{K}-12$ instruction by designing challenging content and curricula frameworks and assessments that include engineering;
2. Increase engineering and technology teacher preparation programs and recruit qualified teachers to provide engineering education in high-needs schools;
3. Promote aspirations for a STEM career particularly in engineering among diverse student populations, especially among girls and underrepresented minorities;
4. Invest in afterschool STEM programs; and
5. Promote STEM competitions such as Math Counts, robotics competitions, and science fairs.
6. Promote partnerships among K-12 school administrators, teachers and business, manufacturing and engineering professionals.

## STEM Designated Degree Programs

Effective date: April 8, 2008; Updated September 25, 2008
The following is a list of Classification of Instructional Programs codes published by the National Center for Education Statistics (NCES CIP codes) that have been designated by ICE as science, technology, engineering, or math (STEM) degrees for the purpose of approving a 17-month STEM extension of optional practical training (OPT) under the provisions of 8 CFR214.2(f)(10)(ii)(C).In order for F-1 students to qualify for this 17-month extension, the code for the student's degree program must be on this list. Other requirements are found in the regulatory language.

[^0]:    ${ }^{1}$ The percent of STEM seniors is larger than that of STEM juniors due to seniors taking longer than 4 years to graduate, i.e., the percent of STEM seniors would include fourth- and fifth-year seniors and possibly even sixth-year seniors.
